## Fuel/Water Separator Filter

### Ultra High Efficiency

- Caterpillar<sup>®</sup> engineers the best protection into all its filters, resulting in a higher efficiency filtration, longer system life, greater reliability and improved equipment productivity.
- Ultra High Efficiency Filter features a super fine synthetic media that removes a higher proportion of fine particles for optimum contamination control in moderate and severe applications.

### Quality Cost-Effective Filtration

Cat® Fluid Filters offer quality features that other filters don't: acrylic beads to prevent pleat bunching; a nylon center tube to prevent metal contamination; spiral roving for greater pleat stability; and molded end caps to eliminate leaks.

#### Acrylic Beads

Maximum Dirt-Holding Capacity

*Only Cat Filters have acrylic beads to help prevent pleat bunching, a common problem experienced by virtually all other filters.*

#### Non-Metallic Center Tube

Maximum System Protection

*Only Cat Filters are made with non-metallic center tubes to better protect the system.*

#### Spiral Roving

Effective Filtration

*Cat Filters feature a unique fiberglass spiral roving to ensure that pleats don't flex, putting an end to pleat movement.*

#### Molded End Caps

No-Leak Bond

*Cat Filters virtually eliminate contaminants from entering the system without a piece, molded polyurethane end caps.*

Separator Filter

Ultra High Efficiency

Technical specifications and a diagram are visible on the top surface of the box. The diagram shows a yellow and black striped pattern, likely representing a filter or separator component. The text is small and difficult to read, but appears to be a list of technical details.
